## Experience

**Jr. Software Developer** | *CellsTech, Armani Group* Jun 2026 – Present | Dhaka, Bangladesh

- **Led the full redesign and rebuild of Natunatta** ([natunatta.com](https://natunatta.com)) end to end. Ran requirement analysis directly with stakeholders, did the UI/UX, rebuilt the frontend, and built the backend from scratch, delivering the group's first fully functional e-commerce platform, now processing **150+ orders a month** across **30+ products**.
- Built the admin side: bulk CSV product import, gift vouchers, order tracking, inventory management, sales analytics, WhatsApp integration, and an embedded chatbot. Integrated **bKash** for mobile payments.
- Designing an **inventory and manufacturing ERP** for commercial release: procurement (PR/PO/GRN), bill of materials, multi-warehouse stock, multi-level approvals, VAT-compliant billing, and fraud controls.
- Selected to lead redevelopment of **NAJUS MSME**, a marketplace with **200+ member enterprises**. Found and fixed hundreds of bugs and built the functions still missing to get it launch ready, including **SSLCommerz** payment integration. Laravel, Angular, MySQL.
- Fixed major bugs on **NTI Learn** ([ntilearnbd.com](https://ntilearnbd.com)) that were blocking release, then built a **resume builder** tied to NAJUS.org membership, from requirements through to production. Now onboarded and live. Laravel, Angular, MySQL, SSLCommerz.
- Built a **guest and visitor management CRM** used at headquarters and every branch company: multi-criteria filtering, blacklist enforcement, ID tracking, interview candidate tracking, analytics, and a meeting-approval dashboard.
- Provide ongoing software support and maintenance across group systems, and act as main point of contact for product managers, business analysts, SQA, design, and PR. Handle deployment on **Cloudflare** and **Firebase**.

**Software Developer** | *Inkphase* Nov 2025 – May 2026 | Dhaka, Bangladesh

- Worked across **6 production products**, including 2 SaaS platforms (a contact management CRM and a multi-tenant AI chatbot service).
- Built frontend and backend for **Sporteroo** ([sporteroo.com](https://sporteroo.com)), a live sports marketplace, including chatbot integration.
- Built a JSON-to-XML transformation service for a healthcare data client in **Django** and **PostgreSQL**.
- Helped design REST APIs and database schemas across **PostgreSQL**, **MySQL**, and NoSQL stores.
- Worked on deployments across **Firebase**, **Vercel**, and **cPanel**, and on CSRF protection, JWT authentication, and rate limiting.

## Skills

|                                    |                                                                                                             |
|------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>                   | Python, TypeScript, JavaScript, PHP                                                                         |
| <b>Frontend</b>                    | Angular, Next.js / React, Tailwind CSS                                                                      |
| <b>Backend</b>                     | Laravel, Django, FastAPI, Node.js, REST API design                                                          |
| <b>Databases</b>                   | PostgreSQL, MySQL, MongoDB, Redis                                                                           |
| <b>Infra &amp; Tools</b>           | Docker, Cloudflare, Firebase, Vercel, cPanel, Linux, CI/CD, Git                                             |
| <b>AI / ML</b>                     | PyTorch, Transformers, Hugging Face, RAG, vector embeddings, LLM APIs, NLP, computer vision, explainable AI |
| <b>Integrations &amp; Security</b> | SSLCommerz, WhatsApp Business API, JWT, Bcrypt, CSRF protection, role-based access control                  |

## Projects

**HealthSync: AI Healthcare Diagnostic Platform** [GitHub](#) | Laravel, FastAPI, PyTorch, MySQL | 2025

- Benchmarked five CNN and Transformer backbones for kidney stone detection on ultrasound images (9,416 public + 1,100+ self-collected, merged 60:40), then applied self-supervised (BYOL) and semi-supervised (FlexMatch, FixMatch) learning, cutting labeled-data needs by 80% while reaching **99.89% accuracy**.
- Built the Laravel-based HealthSync web platform, integrating the kidney-stone detection model through a FastAPI inference service and implementing NephroSense, an AI healthcare chatbot.

- Added Grad-CAM-based explainability to the diagnostic workflow, providing visual heatmaps alongside model predictions for greater interpretability.

### Neera: Maternity Care Platform

[Live App](#) | Cloud Camp BD (AWS) Hackathon | RAG, NLP | 2026

- Built a multilingual (Bangla/English) RAG pipeline over WHO/UNICEF maternal health guidance: scraped web content and OCR'd scanned/Bangla PDFs with Tesseract, then chunked and embedded with Mistral's mistral-embed into Pinecone.
- Implemented language-aware retrieval using metadata filtering, automatically matching queries to the user's language with fallback across languages. Added a resumable migration script to backfill language metadata without re-embedding existing vectors.
- Built a FastAPI ingestion service for URL and PDF sources with API-key authentication, background processing, and webhook callbacks, plus admin APIs for managing the NGO directory used to connect mothers with organizations.

### Multi-tenant AI Chatbot Platform

Laravel, JavaScript, MySQL, OpenRouter API | 2026

- Built a multi-tenant chatbot platform on a shared database, isolating clients by site\_key with per-client configuration for branding, welcome messages, and content policies.
- Integrated OpenRouter as an LLM gateway with a fallback chain of free-tier models for resilience against model outages and rate limits; implemented configurable keyword-based escalation to human support.
- Shipped a framework-agnostic single-script widget supporting React, Next.js, Angular, Laravel, Django, Flask, Node.js, and Shopify, with analytics tracking widget opens, messages, and escalations.

### CareerHive: Full-Stack Job Portal

Next.js, TypeScript, Express, MongoDB | 2024

- Built a full-stack job portal with role-based access for job seekers and recruiters, including JWT authentication, job search/filtering, job postings, company profiles, application tracking, and a resume builder.
- Designed REST APIs with Express and MongoDB/Mongoose, with Cloudinary-backed file uploads. Built the Next.js frontend using Redux Toolkit, Tailwind CSS, and Radix UI.

## Education

---

**East West University**, *B.Sc. Computer Science & Engineering*

Dhaka | 2022 – 2025

Major: Intelligent Systems and Data Science

**Medha Lalon Scholarship** (awarded to the top 3.2% of all students)

## Publications & Datasets

---

- **MAE-ViT: Hybrid SSL ViT for Kidney Segmentation** | IEEE ICCIT 2025 | [doi:10.1109/ICCIT68739.2025.11491313](https://doi.org/10.1109/ICCIT68739.2025.11491313)
- **EDIBLESEED Dataset** | Mendeley Data, 2025 | [doi:10.17632/9xgk2vc3sv.2](https://doi.org/10.17632/9xgk2vc3sv.2)

## Leadership & Activities

---

**Editor & Creative Lead**, EWU Robotics Club (2023–25)

**LFR Team Leader**, led hardware and firmware team (2024)

**Volunteer**, Girl Guides & Bangladesh Red Crescent Society

**Languages**: Bangla (native), English (fluent)
